

instaquim®

Teat sanitiser before milking.

Nipplac Foam

English

It is an innovative product designed for teat hygiene before milking. Formulated with lactic acid and emollients, this product effectively removes dirt and product residues applied after milking, while protecting the teat from the physical aggression suffered during the milking process. Its unique formulation prevents drips, ensuring efficient use without product loss.

Application is simple and convenient. It is applied directly onto the teats using a foam applicator, ensuring uniform coverage. It is recommended to leave the product on for at least 25 seconds to allow for effective action. Before milking, it is important to completely remove all product residues from the teats to ensure proper hygiene.

The appearance is a cloudy green liquid. Its pH ensures a mild and safe formula for sensitive teat skin. The main components of this product include lactic acid, glycerine and emollients, which work in synergy to provide effective cleansing and adequate protection.

It comes in a 20kg presentation, ensuring a long-lasting supply for use on dairy farms or other milking environments. Safe and robust packaging ensures that the product arrives in optimum condition and is ready for use.

Dosage and use instructions:

It is applied pure on the nipples using a foam applicator. Let work for at least 25 s. Completely remove the product remains from the nipples before milking.

Technical data:

Appearance: Green cloudy liquid.

pH: 3.5 +/- 0.5

Main components:

Contains lactic acid, glycerin and emollients.

Presentation:

20 kg.
