Sanitex

Product for the disinfection and hygiene of clothes.

DESCRIPTION

It is the perfect concentrated product for professional laundry disinfection and hygiene. Its highly effective formula is based on the use of quaternary ammonium, a chemical compound widely recognised in the cleaning industry for its ability to provide a high level of cleaning, deodorisation and disinfection.

What makes it even more remarkable is its neutral and non-oxidising nature, making it a safe and compatible option for all types of fabrics. You can be sure that your clothes will be completely disinfected and fresh after every professional wash.

For best results, a dose of 4 grams per kilogram of dry laundry is recommended. Application is made during the penultimate rinse of the wash cycle, and a minimum contact time of 5 minutes is recommended for effective disinfection.

Presentation is in 10 kg, 20 kg and 4x5 kg recipients, allowing for easy handling and storage. This variety of packaging options ensures that you can tailor the product to the specific needs of your professional laundry business.

With Sanitex, you can rest assured that you are providing your customers with a high quality professional laundry service that guarantees total disinfection and hygiene of their garments. Whether you run a commercial laundry, dry cleaner's or any other type of laundry-related business, it is an excellent choice to ensure maximum cleanliness and disinfection in every load of laundry.

DOSAGE AND USE INSTRUCTIONS

Dosage is 4 g per kg of dry clothes. Use in the penultimate rinse, with a recommended minimum time of 5 min.

TECHNICAL DATA

Appearance Colorless transparent liquid.

pH 7 +/- 1
